# About this Resource Kit

Bettysoft SecretFolder Resource Kit is designed to offer you an easy way to build security into your products.

This Resource Kit includes:

- english language file
- ico files

## Create your own resources

### Create a new language for SecretFolder

- 1** Rename the english language file included in this Resource Kit like the language you want to create and open it with a text editor of your choice.
- 2** In a next step you have to change the content of the language file.

#### **2.1 Change the language information**

The first few line of every language file should contain general information about the language. Change these line, so that they describe your language.

```
[LANGUAGEFILE]
name = English
eng_name = English
release = 20151102
```

#### **2.2 Translate the english file**

In a next step you simply have to translate all text written in quotation marks on the right. See example below:

```
LB#newpass = "New password" //English
LB#newpass = "Neues Passwort" //German
```

- 3** Save the file, compress it as .zip and that's it. Your language is ready for upload via the Bettysoft Developer platform.

## Create your own theme for SecretFolder

- 1** The theme folder of the Resource Kit contains several icon files. Do not rename these files!
- 2** Each file you want to modify can be opened in an icon-editor of your choice. After modifying make sure you save them as .ico again.
- 3** When you are done, compress the folder with the modified icons and upload it via the Bettysoft Developer platform.
